

BOATERS BEWARE

Divers in the Water

Diveflag, an innovative design in diver safety, designed to fly on a day with no wind, to alert water users to the presence of divers in the water.

This is the Alpha flag required by law to be flown by dive vessels. This means I have a diver down; keep well clear at slow speed.

This is the U.S. dive flag.

ALL of these flags warn of the presence of divers/snorkelers in the water, although they may not be directly under the flag, so please leave them some room for safety. *Thank you.*
